SUMMARY

Designer drawn to the space where people, problems and design meet. I turn research and ideas into clear, accessible digital experiences. My work spans an exam-prep app, a health concept, an accessibility tool and a government-services rebuild, and has earned a 3rd place at InnoVeX and a Top 250 finish out of 13K+ entries.

EXPERIENCE

UI/UX Intern — ExamDuo

Technologies: UX Research, UI Design, Data Visualization, Developer Handoff, Figma, Claude Design

- Redesigned mock-test analysis and review for an AI exam-prep app (JEE Mains and CAT) in 4 weeks, working with 3 founders and a frontend intern.
- Turned scores into next steps, including a "What if I scored?" percentile predictor, so students know what to fix next.

Google Developer Group (GDG) – Design Team Member

- Designed digital assets, UI/UX mock-ups, and interactive dashboards for workshops and community initiatives while maintaining consistent visual branding.
- Collaborated with the design team to create engaging user experiences and translate concepts into clear, functional digital interfaces.

PROJECTS

MediTrack — Health Memory App

Technologies: UX Research, Information Architecture, User Flows, UI Design, Design Systems, Prototyping, Accessibility, Figma

- Designed a mobile app that matches a new symptom to a person's own medicine history, so they find what worked last time.
- Researched competitors (Practo, 1mg, Healthify), then took it end to end: information architecture, UX and UI, a design system and a Figma prototype.

ColorEase — Accessibility Tool | 3rd place, InnoVeX, team of two

Technologies: UX Research, UI Design, Design Systems, Accessibility (APCA), Developer Handoff, Figma

- Designed a colour tool that flags failing contrast with real-time APCA scoring and previews colour-vision deficiencies, improving low-vision readability by 38%.
- Built it around design tokens and a component library, with CSS variable and Tailwind palette exports so developers can use it straight away.

ECI Citizen Services Rebuild

Technologies: UX Research, User Flows, Service Design, Prototyping, UI Design, Accessibility

- Rebuilt voter forms and grievances around one Journey ID and a visible officer timeline, so citizens never restart a form or chase a case.
- Took it from concept to a working prototype in about a week, as researcher and builder in a team of two.

EDUCATION

MVJ College Of Engineering — Bangalore, Karnataka
Computer Science and design | GPA: 8.6 / 10.0

Christ Academy Junior College — Bangalore, Karnataka
Higher Secondary in PCMC | Percentage: 83%

TECHNICAL SKILLS

Design: UI Design, Interaction Design, Information Architecture, User Flows, Service Design, Design Systems, Data Visualisation
Research: UX Research, Competitor Analysis, Problem Framing, Accessibility Research (APCA, WCAG)
Prototyping and delivery: Prototyping, Developer Handoff, Cross-functional Collaboration
Tools: Figma, Claude Design
Soft Skills: Collaboration, Communication, Leadership, Problem Solving, Curiosity, Adaptability, Time Management

CERTIFICATES AND ACHIVEMENTS

- **VerTechX — Department Lead:** Led departmental activities and coordinated event planning and execution for a national-level technical fest.
- **3rd Prize – INNOVEX 2025 (ColorEase):** Engineered an inclusive feature supporting multiple colour-blind modes aligned with WCAG accessibility standards, enhancing user experience.
- **Inscribe — Workshop Speaker:** Lead and hosted a blender workshop as Animation Lead at Inscribe
